Cervical cancer is the second most common cancer among women in India, accounting for 22.86% of all cancer cases in women. The GLOBOCAN 2020 data states that more than 70,000 deaths are reported annually due to cervical cancer in India . This program will bring forth various aspects of the Cervical cancer screening such as WHO global initiative for elimination of cervical cancer, screening methodologies like LBC and HPV testing and interesting case scenarios.
